---	--

12. Repairs anticipated to be completed by:
Enter Date

Official Use Only:	Reference Number:
---------------------------	--------------------------

Name/Stamp:

☐ Equivalence under MARPOL Annex VI, Regulation 4 is still valid. With reference to MEPC.1/CIRC.883/Rev. 1 Sections 9 - 11, the Republic of the Marshall Islands Maritime Administrator (the "Administrator") has no objection to the vessel continuing to operate the EGCS with the malfunctioning sensor until repaired as required in accordance with the abovementioned corrective action plan, effective **Enter Date**, on condition that all other measured parameters remain normal, and that no other sensor failure occurs.

Details of the above must be recorded in the EGCS Record Book and available for inspection by relevant authorities.

If the corrective action plan cannot be completed by **Enter a Date**, the vessel's RO is to be contacted for further follow up.

Any further sensor failure would constitute a malfunction of the EGCS, and immediate corrective action should be taken including, if necessary, changing over to compliant fuel. The Administrator and the vessel's RO must also be notified.
